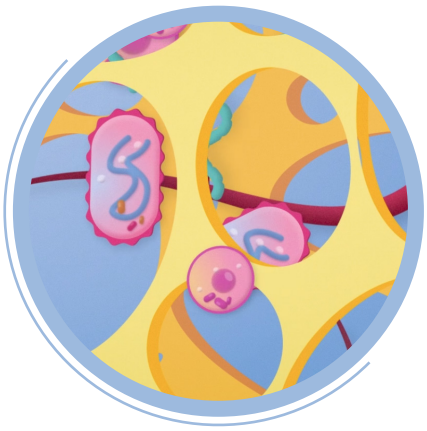
Zymo-Teck® the secret of quality grafts



Bioteck bone substitutes are obtained from equine bone tissue treated with Zymo-Teck®. This exclusive proprietary process is based on the utilization of lytic enzymes operating at controlled temperatures. This enables the complete elimination of the antigen components of the tissue, without the mineral phase undergoing any changes.

The unmodified bone mineral component is recognized as endogenous by the osteoclasts, thereby allowing for the total remodeling of the graft, which is completely replaced, in physiological time, by new patient vital bone tissue. The best possible condition for osseointegrated implants.
